PLUSH TOY WITH ARTIFICIAL INTELLIGENCE

ADV-5050

Talks out loud with ChatGPT · over 66 languages · expressive 1.28" eyes

RUNS ON THE CHATGPT AI MODEL
Real conversation, not recorded answers

Plush toy with artificial intelligence based on ChatGPT: it talks out loud in over 66 languages, shows how it feels on a 1.28-inch display in its eyes and lets you create characters from the app. Hi-Fi stereo speakers, a noise-cancelling microphone and a 1200 mAh battery.

WHAT IT SOLVES

A companion that talks and changes character

ChatGPT intelligence
Answers are generated on the spot, so the talk never repeats itself or runs out like a recording.

Eyes that show it
A 1.28-inch display on its face shows emojis and lighting modes to match what happens.

Over 66 languages
It talks and answers in dozens of languages: good for practising English or any other language at home.

Noise-cancelling mic
It filters household noise so it understands a child well, which is where talking toys usually fail.

An adult sets up the app: Bubú is run from the Tuya Smart app, and that is the part for the adult: it connects to the home WiFi, the characters are created and the role of the toy is set. The child only talks. Worth saying at the point of sale, because with no WiFi and no app set up the toy will not talk.

WHERE IT FITS

Made to accompany, teach and entertain

LEARNING BY TALKING

Language practice, no screen

Over 66 languages and talking out loud: the child practises by talking to the toy, with no tablet or phone in between.

- Over 66 languages
- Talks out loud
- Real-time answers

MADE YOURS

Each family builds its Bubú

Roles and characters are created from the app: the toy can be a storyteller, a homework tutor or simply someone to play with.

- Character creation
- Configurable roles
- Tuya Smart app

A GIFT

A toy first, a device second

A present that is not a gadget: it listens, answers and plays without a screen to stare at, and it needs no tablet or phone of its own.
